

Company History

Meetings Industry Experts

CadmiumCD has spent the last fifteen years building technology for meeting planners and event managers. With an all-inclusive line of products and services, CadmiumCD strives to ease the conference planning and management processes. Their fully integrated system includes abstract collection, exhibitor and speaker data management, attendee accessible websites & floor plans, mobile event applications, proceedings distribution, and A/V recording.

Where It All Began

Co-Founders, and husband-wife team, Peter and Michelle Wyatt began their careers as chemical engineers. They frequently attended conferences and saw a problem with the way meeting education was handled. They knew the industry was moving away from paper proceedings and began distributing proceedings

digitally on CD. The company name is a marriage of this past, bringing together the foundation of the company - proceedings on CD - and the Wyatt's chemical engineering backgrounds (CD is the abbreviation for the element Cadmium!).

Small Business, Big Impact

What began as a small outfit run by family and friends from a basement office has now grown to become a leader in event technology. CadmiumCD is now one of the most well-respected companies in the field. They have served a wide variety of clients that span multiple industries.

Fully Integrated Products
